# National Pesticide Information Center

#### 2019 Annual Report

First Operational Year: 2/15/19 - 2/14/20

Cooperative Agreement # X8-83947901
Environmental and Molecular Toxicology
Oregon State University
310 Weniger Hall
Corvallis, OR 97331-6502
800-858-7378
npic.orst.edu

The National Pesticide Information Center (NPIC) is a service that provides a variety of pesticide and related information to the general public and professionals across the United States and its territories. NPIC is a cooperative agreement between Oregon State University and the US Environmental Protection Agency. The 2019 Annual Report covers the period of February 15, 2019 - February 14, 2020.

#### **DISCLAIMER**

Material presented in this report is based on information as provided to NPIC by individuals who have contacted NPIC for information or to report a pesticide incident. None of the information reported to NPIC has been verified or substantiated by independent investigation by NPIC staff, laboratory analysis, or any other means. Based on the information provided, NPIC qualifies the information by assigning a certainty index (CI) and a severity index (SI). NPIC makes no claims or guarantees as to the accuracy of the CI, SI, or other information presented in its reports, other than that NPIC has done its best to accurately document and report the information provided to NPIC.

#### **Table of Contents**

Program Highlights and Summary	
Objectives and Deliverables	4-12
Difficulties, Deviations, and Departures	12
Pesticide Data	13-35
Severity greater than minor	36-41

#### **NPIC Mission Statement**

• The primary mission of the National Pesticide Information Center (NPIC) is to provide objective information, collect and report incident data, use cutting edge technologies, and conduct extensive outreach to diverse audiences to promote a better understanding of pesticide use, with an overall goal of reducing risks to people, animals, and the environment.

#### **General Compliance Statement**

- Throughout the reporting period, NPIC has complied with the requirements of the U.S.
   Environmental Protection Agency (U.S. EPA) regarding Title VI of the Civil Rights Act of 1964 and Section 13 of the FWPCA Amendments of 1972.
- NPIC has complied with U.S. EPA Guidelines regarding procurement requirements stipulated in 40 CFR Part 33.
- NPIC has complied with all special requirements specified by U.S. EPA as part of the funding authorization of this project.

Submitted To:

US Environmental Protection Agency
Office of Pesticide Programs

Submitted by April 14, 2020 from:

Jeff Jenkins, PhD Director/Principal Investigator

#### Introduction

NPIC provides objective, science-based information about pesticides and related topics to enable people to make informed decisions about pesticides and their use. In this, the fifth year of the project period under cooperative agreement #X8-83947901, Oregon State University (OSU) provided information to millions of people by phone, email, social media, data-sharing, mobile web apps, and/or web content.

NPIC supports the U.S. Environmental Protection Agency (U.S. EPA)'s 2018-2022 Strategic Plan Goal 1: Core Mission, and Objective 1.4: "Ensure Safety of Chemicals in the Marketplace," which states: "Effectively implement the Federal Insecticide, Fungicide, and Rodenticide Act to ensure new and existing chemicals and pesticides are reviewed for their potential risks to human health and the environment and actions are taken when necessary." NPIC also supports the mission of the OSU Extension System, conveying research-based knowledge in a way that is useful for people to improve their lives, their homes, and their communities.

The complete record of NPIC accomplishments for the operational year includes this annual report, four quarterly reports, and a quality assurance report. Quarterly and supplemental reports were submitted to the Project Officer within 30 days of the reporting period's closure

#### **Program Highlights and Summary**

- NPIC responded to 9,970 inquiries this year, including 7,163 phone calls, 1,581 emails, 1,222 voicemails, and four via mail. The average call duration was 6.6 minutes. NPIC responded to 218 inquiries in Spanish, three in Tagalog, two in Quichua, two in French, one in Italian, one in American Sign Language, one in Marathi, and one in Gujarati.
- Most inquiries to NPIC came from members of the general public (87%). NPIC also responded to
   241 inquiries from government/enforcement agencies, 97 inquiries from medical professionals (34% veterinary), 39 inquiries from pesticide retail or nursery employees, and 25 inquiries from health agencies.
- The NPIC website received 7,698,384 pageviews, representing a 5% increase from last year.<sup>1</sup> NPIC added new links to its website, as high-quality science and regulatory items were identified.
- Two human deaths related to pesticides were reported to NPIC. Thirty-nine (39 animal deaths were reported.

#### How are people finding NPIC?

4,328 from the Internet (34.4%)

1,994 from a product label (20.0%)

1,187 from previous contact with NPIC or word of mouth (11.9%)

1,142 from pest control companies (11.4%)

248 from state pesticide regulatory agencies (2.5%)

80 from EPA personnel (0.8%)

44 from university extension (0.5%)

26 from medical/veterinary professionals (0.4%)

1,765 from other/unknown entities (17.7%)

<sup>&</sup>lt;sup>1</sup>This metric cannot be calculated by half-month. As such, these numbers represent the calendar year of 2019.

#### **Objectives and Deliverables**

1. Serve as a source of factual, unbiased information for diverse audiences including the agricultural and pest control community, healthcare providers, educators, consumers, and the general public.

Anticipated outcomes	Actual outcomes
Maintain open hours from 8:00am-12:00pm, Monday - Friday	NPIC maintained open hours from 8:00am to 12:00pm Pacific Time, Monday-Friday, excluding holidays, with no closures due to technical or staffing issues.
Maintain multilingual capabilities	NPIC maintained multilingual capabilities during 100% of operational hours.
Respond immediately to 95% of calls	NPIC responded immediately to 99% of calls received during open hours. Occasionally when call volume is high, people may choose to leave a message.
Respond to 95% of messages within one business day	NPIC responded within one business day 99% of the time when inquiries were received via voicemail, email, and/or social media.
Recruit/retain highly qualified Pesticide Specialists	NPIC recruited three pesticide specialists this year, retaining four highly qualified pesticide specialists total.
Create marketing plan by end of Year 1	NPIC developed and sent a marketing plan to the EPA Project Officer this year. The marketing plan was developed to ensure the widest-possible utilization of NPIC program outputs, maximizing the public and professional benefit of funded activities.

# 1. Serve as a source of factual, unbiased information for diverse audiences including the agricultural and pest control community, healthcare providers, educators, consumers, and the general public (cont'd).

Anticipated outcomes	Actual outcomes	
Perform 5 collaborative	NPIC collaborated with 18 organizations this year to provide outreach and	
outreach/expert consultation efforts	expert risk communication instruction to pesticide applicators, regulators, and educators, including:	
•	·	

2. Provide information on a wide variety of pesticide-related subjects including, but not limited to, pesticide products, toxicology, environmental chemistry, safety practices, pesticide regulation, enforcement, risk assessment, risk management, environmental effects, clean-up and disposal, understanding the label, recognition and management of pesticide poisonings, and integrated pest management (IPM).

Anticipated outcomes	Actual outcomes		
Monitor 5-10 relevant publications	In order to stay current, NPIC staff members monitored 20 relevant publications and publication indexing services, including federal register notices (pest), affiliated dockets, newsletters, listervs, and selected journals of relevance.		
Evaluate information about pesticide science and regulation	NPIC exceeded this year's goal of evaluating 1,000 articles, documents, and websites in order to maintain and expand up-to-date, reputable, immediately accessible and optimized information about pesticide science and regulation. This year NPIC evaluated 2,269 relevant articles, documents, and websites.		
Create/update 20 Al files	NPIC updated eight active ingredient (AI) files and created 12 new AI files:		
	<ul> <li>New</li> <li>1,2-Hexanediol</li> <li>Bixafen</li> <li>Cinnamon oil</li> <li>Bacillus</li> <li>DTEA-HCl</li> <li>Menthol</li> <li>Beauveria bassiana</li> <li>Organic esters of phosphoric acid</li> <li>Calcium Phosphite</li> <li>Clonostachys rosea</li> <li>Flutianil</li> <li>Mefentrifluconazole</li> <li>Pydiflumetofen</li> <li>Valifenalate</li> <li>Through monitoring activities, NPIC added 757 new documents to AI files, including 493 new documents added to existing files, identified through regular monitoring activities.</li> </ul>		
Attend 15-20 CE events	NPIC staff members attended 48 events for continuing education (CE) this year, including 16 webinars, 15 on-campus events, 12 off-campus events, and five inhouse presentations.		
Track risk-reduction conversations	NPIC tracked certain elements in order to quantify risk-reduction activities. In conversations with callers, pesticide specialists discussed ways to minimize exposure 2,536 times, following the label 2,306 times, IPM concepts 713 times, and environmental protection (including pollinator protection) 114 times.		
Maintain continuous storage capacity	NPIC maintained storage capacity in order to ensure continuous access to NPIC resources by stakeholders, documenting and reporting milestones to inform future efforts for secure, long term data storage and hosting capacity.		

# 3. Address current and emerging pesticide-related issues and provide federal, state, and local resources on the topics in Objective 2.

Anticipated outcomes	Actual outcomes		
Discuss "Important and Interesting" cases	NPIC specialists were polled about trends and discussed 100% of cases flagged as "important and interesting" as a team. Specialists discussed 47 cases during the year.		
Discuss trends and data with OPP as part of quarterly coordination meetings (QCM)	<ul> <li>NPIC discussed potential trends and data with EPA Office of Pesticide Programs (OPP) including:</li> <li>Callers expressing concern or confusion over label instructions, professionals seeking risk communication techniques, FIFRA questions from Amazon retailers, and questions about converting farmland to hemp.</li> <li>Incident and inquiry trends for GY5 of the prior project period (2018-2019) during the annual site visit to EPA on June 19, 2019. In addition, NPIC highlighted call trends related to mothballs, glyphosate litigation and glyphosate on cereal, converting farmland to hemp, and professionals seeking communication techniques from NPIC.</li> <li>As a follow up to label misinterpretation and misuse data discussed during the site visit with the Communication Services Branch (CSB) of Field and External Affairs Division (FEAD), NPIC and CSB agreed to have NPIC flag narratives where callers report "false or misleading information" on their labels.</li> <li>NPIC and OPP Health Effects Division (HED) discussed expanding criteria for noteworthy incidents sent to EPA to include more childhood cases.</li> <li>Trends in active ingredient questions from callers, including the popularity of glyphosate and mothballs, as well as incident queries about dicamba drift incidents and reasons for boric acid inquiries to NPIC.</li> </ul>		
Share noteworthy cases with EPA	NPIC shared 56 noteworthy cases with the Project Officer during the 2019 grant year period.		
Compile statistics and submit timely reports	NPIC compiles summary statistics about inquiries received on a quarterly and annual basis. All quarterly reports were submitted within 30 days of the quarter's closure, along with an annual report, quality assurance report, and project closure summary for the 2014-2019 grant period.		
Submit VIRP and Eco- reports to EPA	Veterinary professionals submitted 20 incident reports using NPIC's Veterinary Incident Reporting Portal. Twenty-five incident reports were submitted using NPIC's Ecological Incident Reporting Portal. All of these are included in supplements to this annual report.		
Provide special reports to EPA and state pesticide regulatory agencies within 2 weeks	<ul> <li>NPIC provided 25 special reports this year including data requests from:</li> <li>EPA OPP Health Effects Division (10)</li> <li>EPA OPP Field and External Affairs Division</li> <li>EPA Region 9 (2)</li> <li>Pesticide Educational Resources Collaborative–medical (PERC-med) (2)</li> <li>New York State Department of Environmental Conservation (4)</li> <li>Wisconsin Department of Agriculture, Trade, and Consumer Protection</li> <li>Michigan Department of Agriculture and Rural Development</li> <li>Oregon Department of Agriculture (2)</li> <li>Oregon State University</li> <li>One public records request</li> </ul>		

# 3. Address current and emerging pesticide-related issues and provide federal, state, and local resources on the topics in Objective 2 (cont'd).

Anticipated outcomes	Actual outcomes
Promote the availability of NPIC data	NPIC promoted the availability of NPIC inquiry data to state lead agencies, US territories, and tribes. States and territories were contacted directly and the chairperson and vice chairperson of the Tribal Pesticide Program Council were provided with the information about data requests to distribute to tribes. In addition, NPIC promoted data availability to state lead agency attendees at The Pesticide Stewardship Alliance annual meeting.
Review project deliverables to coordinate with AAPCC and OHSU	NPIC continued to monitor and improve its working relationship(s) with AAPCC and OHSU, ensuring that baseline expectations were met and/or exceeded.  NPIC and AAPCC released an infographic about Rodent Bait Safety as part of annual deliverables. AAPCC shared the infographic through social media and a targeted press release to partner agencies.
Make timely referrals to appropriate state and local resources	Referrals from NPIC to state and local resources are evaluated annually. This standard was measured using formally graded Log Assessment Reviews for each specialist. All evaluated referrals were deemed timely and appropriate with 0% margin of error.

# 4. Provide reputable, science-based information in a manner understandable to a lay audience to help people make informed decisions.

Anticipated outcomes	Actual outcomes	
-	NPIC will create/update 40 new and/or translated items per year, which may include topic summaries, FAQs, articles, unique social media posts, content for smart speakers, and other media, with 90% of items	
1	targets. NPIC created or updated 306 new and/or translated materials this year.	
Create/update 5-10 web	NPIC created/updated 15 new web pages this year titled:	
page	Adjuvants in Pesticides	
	Atrazine introduction page, fact sheet, and references	
	Biochar and Pesticides	
	Daycare & School Poison Safety	
	• Mites	
	Non-Chemical Pest Control Devices (update)	
	NPIC Outreach Materials (update)	
	Pesticide Home Remedies	
	Pesticides: An Introduction for Poison Control Centers	
	Petroleum Distillates in Pesticides	
	Treated Seeds	
	Wood Boring Beetles	
	Writing NPIC Fact Sheets	
Develop 2-4 new	NPIC developed four new infographics, titled:	
infographic materials	Neem Oil	
	Personal Protective Equipment	
	Rodent Bait Safety	
	Systemic Pesticides	

# 4. Provide reputable, science-based information in a manner understandable to a lay audience to help people make informed decisions (cont'd).

Anticipated outcomes	Actual outcomes	
Develop 2-4 new fact	NPIC developed three new fact sheets titled:	
sheets	Atrazine	
	Pesticides: An Introduction for Poison Control Centers	
	Writing NPIC Fact Sheets	
Formalize procedures for reference selection in	NPIC continued to update procedures for selecting references in fact sheets.  After these procedures were evaluated and revised during Year 1, NPIC created	
fact sheets	a publicly-available webpage about selecting scientific references called "Writing NPIC Fact Sheets".	
Post 2-4 items per week in social media venues	NPIC posts new items in social media venues (Facebook and Twitter) promoting safe use practices, IPM, and pesticide label comprehension. This year NPIC uploaded 283 total posts, averaging 5 per week.	
Develop and deliver one webinar	NPIC developed and delivered a webinar on February 13, 2020 titled, "Using NPIC's Veterinary Portal for Pesticide Incidents." NPIC communicated with OPP about the webinar during the QCM on January 22, 2020.	
Remove/replace 100% of broken links	NPIC reviewed 100% of web content and removed or replaced 394 broken links	
Update 200 contacts	In order to provide the best referrals when appropriate, NPIC actively verifies/ updates contact lists on a routine basis. This year NPIC updated more than 650 contacts, including:	
	EPA Regional Offices	
	Pesticide Safety Education Program Coordinators	
	Soil and Water Districts	
	State Environmental Agencies	
	State Health Agencies  Otate Bartiside Ba	
	<ul><li>State Pesticide Regulatory Agencies</li><li>University/State Extension</li></ul>	
Ensure continuous	NPIC ensured continuous access to NPIC web apps by stakeholders, maintaining	
access to NPIC apps	and expanding software applications, tools, and mobile apps.	
	NPRO was updated within one week of all publications to PPLS and PPIS datasets.	

# 4. Provide reputable, science-based information in a manner understandable to a lay audience to help people make informed decisions (cont'd).

Anticipated outcomes	Actual outcomes	
Coordinate with OPP on proposed projects	NPIC coordinated and communicated with OPP frequently throughout the year including:	
	<ul> <li>Discussions with OPP FEAD about outreach to US Customs &amp; Border Protection officers, for which NPIC compiled an internal contact list.</li> <li>Notifications to EPA about occupational exposures, professional applications resulting in incidents, peanut allergies related to bait products, Seresto flea collar incidents, and reports of dead or missing bees. Other priorities included creating materials related to pool chemicals and pollinator protection.</li> <li>A 2-hour training presented by Kaci Buhl during the site visit on risk communication for OPP and OCSPP staff.</li> <li>A follow-up discussion with the FEAD's Communication Services Branch about details of caller confusion or concerns about pesticide labels. This information was expanded and provided for presentation at OPP's Labeling Consistency Committee meeting in July. In collaboration with OPP, NPIC began flagging complaints about labels that have false or misleading information.</li> </ul>	
	<ul> <li>Language updates to NPIC's Ecological Pesticide Incident Reporting Portal with suggestions from OPP's Environmental Fate and Effects Division (EFED).</li> </ul>	
	<ul> <li>Sending summary reports of childhood exposures when there are symptoms of moderate or greater severity to the OPP Health Effects Division.</li> <li>Discussions with the Registration Division about possible changes to pest and site combinations resulting from future use of the Office of Pesticide Program Electronic Label (OPPEL) system.</li> </ul>	
	<ul> <li>Communications about a new NPIC fact sheet, Atrazine, for which EPA OPP Pesticide Reevaluation Division provided comments.</li> <li>OPP's Communication Services Branch working with NPIC about updates to an EPA "Contact Us" webpage and social media post discussing NPIC services and referrals to NPIC.</li> <li>OPP staff providing feedback for NPIC's updated webpage "Non-Chemical Pest Control Devices".</li> </ul>	

# 5. Collect and disseminate quality pesticide incident data via a rigorous and well-defined data collection system.

Anticipated outcomes	Actual outcomes
Capture 80% of human demographics	NPIC specialists were able to document demographic information for 100% of human incidents, including age and/or gender. Callers occasionally decline to provide personal information such as age.
Capture 80% of incident information	"Incident information" includes information such as symptoms, time to onset of symptoms, and circumstances surrounding reported exposures.
	Among 1,363 reported incidents involving humans or animals, NPIC specialists were able to capture the symptom/scenario information in 93% of cases.
Capture 80% of product information	NPIC specialists were able to collect product information for 92% of reported incidents.
Capture 80% of location	NPIC specialists were able to document the location for 94% of reported pesticide incidents.
Capture 70% of exposure routes	Among the 1,363 reported incidents involving humans or animals, NPIC specialists were able to capture the exposure route in 84% of cases.
Classify reported signs/ symptoms in terms of severity and certainty	NPIC used standard operating procedures and rigorous quality control to classify reported signs/symptoms in terms of severity (severity index) and in terms of their relationship to the reported exposures (certainty index).
	NPIC assigned a severity index 100% of the time when signs/symptoms were described (1,574 times). NPIC assigned a certainty index 100% of the time when signs/symptoms were described, and they could be compared to published reports about the active ingredient(s) involved (669 times).
Incorporate user feedback for the VIRP and Eco-portals (Y2, Y4)	NPIC responded to user feedback by updating/ improving the Eco-Portal and VIRP, as needed, including suggestions by OPP staff during the site visit.
Monitor data quality and take steps to ensure high standards are met	NPIC produced internally routed human and animal incident reports in coordination with Dr. Berman (OHSU), highlighting any changes in coding that were made in the QA process.
	Additionally, 100% of records were evaluated using automated QA protocols and all cases with symptoms were manually inspected/verified.
Deliver at least 6 quality assurance exercises lead by the QA/QC specialist.	The QA/QC facilitator led nine training exercise(s) during staff meetings to facilitate consistency in data quality.
Conduct LARs to ensure data quality	Log Assessment Reviews (LARs) were conducted as part of regularly scheduled annual staff evaluations (see Objective 6), including quantifiable measures of data completeness and coding consistency.
	Deliverable upon hiring new staff, formally graded LARs were completed for three new specialists, twice, in order to establish consistent habits in coding and data entry, including timely and appropriate referrals with less than 5% margin of error.

6. Provide exceptional customer service by integrating professionalism, teamwork, integrity, accountability, and a strong commitment to the public, as well as to the professional and medical communities.

Anticipated outcomes	Actual outcomes
Develop and execute a rigorous training	NPIC recruited and hired two highly qualified pesticide specialists this year, in addition to hiring a highlyskilled former Pesticide Specialist for summer help.
program	All training materials were updated, including the NPIC training manual, "stop points," exercises, and mentored practice scenarios. All NPIC staff participated in training and mentoring new hires
Complete one evaluation event through 3rd-party assessment,	Annually, NPIC completes one evaluation event through 3rd-party assessment of NPIC services or by conducting website usability testing.
yearly	NPIC evaluated customer service skills through use of 3rd-party professional assessment, conducted by BestMark, Inc. Amy Cross worked with BestMark, Inc. to develop a customized assessment questionnaire for shoppers and received comprehensive reports for each Pesticide Specialist. Shoppers evaluated Specialists on customer service skills, including the ability to determine caller's needs, provide customized information, professionalism, efficiency, and overall effectiveness.
Evaluate staff members annually	NPIC comprehensively evaluated each staff member in Q3, including quantified measures of data collection skills (see Objective 5), referral appropriateness, customer service skills, and continuing education measures.
Site visit to EPA in GY1	Key personnel from NPIC visited OPP in Q2 on June 19, 2019, including the Director, Assistant Director, and Project Coordinator.

#### Difficulties, Deviations, and Departures

NPIC advertised one full-time position after the departure of Spanish-fluent pesticide specialist Sean Perez. Two separate searches failed to locate a qualified replacement. Due to staffing needs, a candidate without Spanish fluency was hired. NPIC maintains bilingual capabilities 100% of the time via a contract with LanguageLine Solutions®. NPIC continues to evaluate ways to provide in-house expertise for Spanish-speaking customers and prioritizes Spanish fluency during recruitment.

April Strid, M.Sc., departed from NPIC this year after a 2.5-year tenure. Efforts to recruit and train her replacement prior to her departure were successful.

Alicia Leytem, M.Sc., departed from NPIC this year after a 5.5-year tenure. Efforts to recruit and train her replacement prior to her departure were successful.

Susannah Bodman, BS Biology, MA Anthropology (Archaeology), BA Journalism, departed from NPIC this year after a 2.5-year tenure. Efforts to recruit her replacement began in Grant Year 2, Quarter 1.

#### **NPIC DATA**

#### **Introduction to Inquiry Data**

Pesticide specialists create a record for every inquiry, which is entered into the NPIC Pesticide Inquiry Database (PID). PID is a relational database, designed and built by NPIC. Custom reports may be available based on many of the items listed below.

There are three types of inquiries received by NPIC:

- Requests for information about pesticides and related issues
- Inquiries or reports about pesticide incidents
- Issues that are not related to pesticides

The type and amount of information entered into the PID depends on the type of inquiry.

NPIC aims to collect the following information for all pesticide-related inquiries:

- The inquirer's zip code or state
- The type of person (general public, government, medical personnel, etc.)
- The type of question (health risk, regulatory compliance, label clarity, etc.)
- The EPA registration number, product name and/or active ingredient name(s)
- The actions performed (verbal information, referrals, transfers, etc.)
- The way the person found NPIC (web, referrals, etc.)

For pesticide incidents, NPIC makes every effort to collect these additional data:

- The type of incident (exposure route, misapplication, spill, etc.)
- The type of exposed entity (person, animal, building, etc.)
- The location of the incident (inside the home, outside the home, retail store, school, etc.)

If a person or animal was exposed to a pesticide, NPIC specialists attempt to collect additional information. However, they may not ask for all of these items during emergency medical events.

- A timeline describing the exposure duration, symptom onset, and resolution
- The person or animal's age, symptoms, and gender
- The species, breed, and weight of animals

When symptoms are reported and the active ingredient(s) are known, specialists evaluate the relationship between them to assign a **certainty** index. The certainty index is an estimate by NPIC as to whether the reported symptoms were consistent or inconsistent with published reports/materials for the identified active ingredients, in the context of the reported pesticide exposure. Specialists use the following tools when assigning the certainty index:

- A standard set of criteria, defined in NPIC training and procedures
- Published exposure reports and case studies
- Input from Dr. Berman, DVM, for human and animal exposure incidents
- Input from the PID QA/QC specialist

Symptoms are also characterized in terms of their **severity** in the PID. The criteria for defining major, moderate, and minor symptoms were adapted from similar mechanisms used by poison control centers in the National Poison Data System, and by the U.S. EPA in the Incident Data System.

### NPIC DATA

The following pages include details about the incidents and inquiries documented by NPIC from February 15, 2019 to February 14, 2020.

#### **Disclaimers and Explanatory Information:**

- Material presented in this report is based on information provided to NPIC by individuals who contacted NPIC, primarily by phone or email.
- None of the information has been verified or substantiated through independent investigation by NPIC staff, laboratory analyses, or by any other means. This is similar to other self-reported public-health-monitoring programs, including the incident data recorded by poison control centers.
- If a person alleges/reports a pesticide incident, it will likely be recorded as an incident by NPIC. To meet the
  criteria, the person must have sufficient knowledge about the scenario, and it must be reported within two
  years of its occurrence.
- NPIC defines an incident in terms of public health. The NPIC definition includes any unintended exposure
  (i.e., child ate a mothball), intended exposures with adverse effects (i.e., illness in pets treated with flea/tick
  products), spills, and potential misapplications (i.e., a product intended for ornamental plants was applied
  to vegetables in the home garden.)
- About 1% of the time, callers' main purpose for contacting NPIC was to report a pesticide incident. More
  often, they contacted NPIC to obtain technical information. See page 20. Regardless, NPIC specialists
  make every effort to collect complete information about scenarios that meet the NPIC incident definition.
  Approximately 16% of inquiries to NPIC are coded as incidents.
- NPIC specialists are trained to recognize scenarios that could potentially lead to enforcement actions. In these cases, the standard operating procedure requires a referral to the appropriate State Lead Agency, provided to the inquirer. See page 21.
- NPIC qualifies the information received by assigning a certainty index (CI). The CI is an estimate by NPIC
  as to the likelihood that the reported signs and symptoms were consistent or inconsistent with published
  reports/materials for the identified active ingredients, in the context of the reported pesticide exposure. See
  page 27.
- NPIC makes no claims or guarantees as to the accuracy of the CI or other information presented in its
  reports, other than that NPIC has done its best to accurately document the information provided to NPIC.
- It is occasionally necessary to collect personally identifiable information (PII) in order to respond to
  inquiries, for example, by voicemail, email, or mail. Users of web-based incident reporting portals may have
  the option to submit PII as part of their reports. In all other cases, it is NPIC policy to refrain from collecting/
  documenting PII from people who contact NPIC through public channels.
- Through its cooperative agreement with EPA, NPIC provides special reports upon request. Special reports
  may also be provided to other cooperative agreement holders with EPA, such as state-level agriculture and
  environmental protection agencies. Other entities with interest in special reports should contact NPIC to
  inquire about the procedure and possible costs.

# **MONTHLY INQUIRIES**

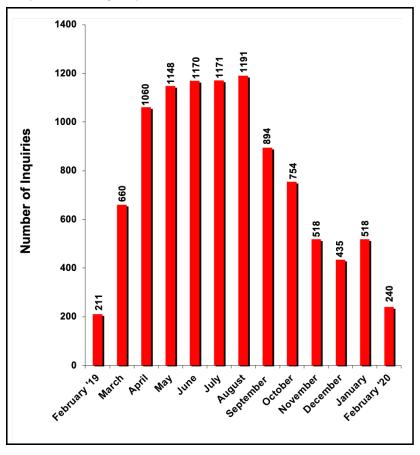

#### 1. Monthly Inquiries

NPIC received 9,970 inquiries during this grant year. Graph 1 shows the number of inquiries received for each month. Seventy-four percent (74%) of the inquiries were received between April and October, concurrent with the part of the year when pest pressures are highest.

**Table 1. Monthly inquiries** 

Month	Total
February 2019	211
March	660
April	1060
May	1148
June	1170
July	1171
August	1191
September	894
October	754
November	518
December	435
January	518
February 2020	240

**Graph 1. Monthly inquiries** 

# TYPE OF INQUIRY / ORIGIN OF INQUIRY

#### 2. Type of Inquiry

NPIC classifies inquiries as information, incident, or other (not pesticide related) inquiries. A pesticide spill, misapplication, contamination of a non-target entity, or any purported exposure to a pesticide, regardless of injury, is classified as an incident.

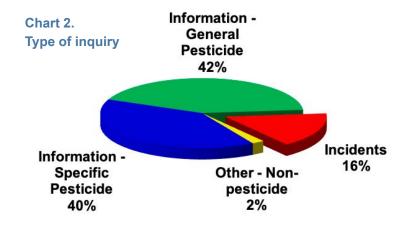

The types of inquiries are summarized in Table 2 and Chart 2.

The majority of inquiries (8,162 or 82%) were informational inquiries about pesticides or related topics (Chart 2). NPIC responded to 4,203 (42%) information inquiries about pesticides in general. NPIC responded to 3,959 (40%) information inquiries relating to specific pesticides or active ingredients.

NPIC documented 1,613 incidents involving pesticides (16%). Pesticide Specialists routinely provided requested information, evaluated the need for any referrals, and asked several scoping questions to document the circumstances surrounding the reported incidents.

Table 2. Type of inquiry

Type of Inquiry	Total
Information - Specific Pesticide	3959
Information - General Pesticide	4203
Incidents	1613
Other (nonpesticide)	195
Total =	9970

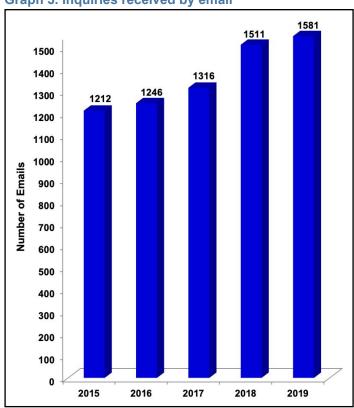

#### 3. Origin of Inquiry

Table 3 summarizes the origin of inquiries received by NPIC. About 84% of inquiries were received by telephone.

Table 3. Origin of inquiry

Origin of Inquiry	Total
Phone	7163
Email/Web	1581
Voicemail	1222
Mail	4
Total =	9970

Graph 3. Inquiries received by email

# **NPIC WEBSITE**

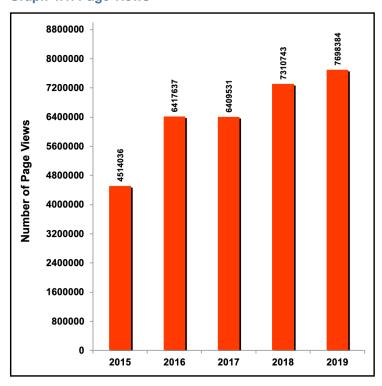

#### 4. Website Access

The NPIC website attracted more than 3.5 million unique visitors viewing 7,698,384 pages during this period. Page views of the NPIC website are up 5% from last year.

Most page views originated from queries on popular search sites (54.5%). Others were connected with NPIC from a bookmark (38.6%) or direct link (i.e., shared via email). The most popular search phrases used to reach NPIC were "pesticide," "ARS," and "roach." "ARS" likely refers to the USDA's Agricultural Research Service.

Visits to the website varied greatly in duration, with 172,154 visits lasting longer than 15 minutes. The average visit duration was approximately 2 1/2 minutes.

Graph 4.1. Page views

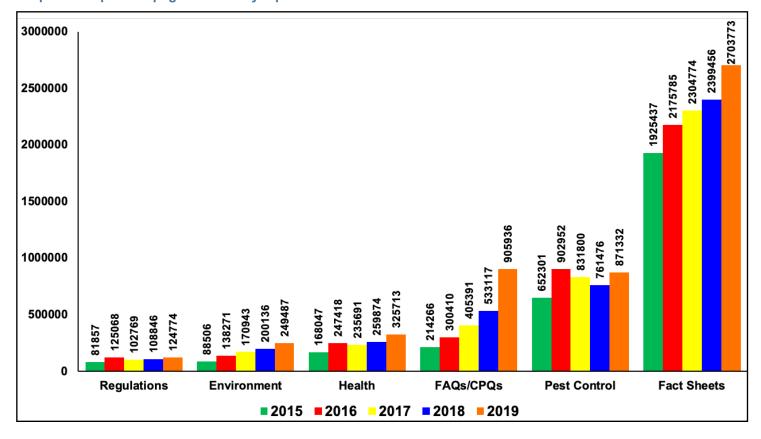

The most popular pages viewed were the NPIC home page (367,459 views), NPRO (292,989 views), and the glyphosate general fact sheet (253,723 views).

# TYPE OF INQUIRER

#### 5. Type of Inquirer

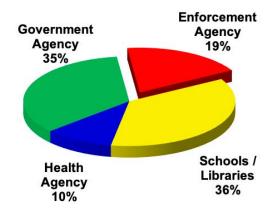

Table 5 summarizes the profession/ occupation of individuals contacting NPIC. The majority of inquiries to NPIC are from the general public. Of the 9,970 inquiries received, there were 8,643 (86.7%) from the general public, 241 (2.4%) from federal, state, local government agencies, or schools, 205 (2.1%) from pesticide manufacturers, and 97 (1.0%) from human and animal medical personnel.

Chart 5 summarizes the 241 governmental entities that contacted NPIC during the grant year. Health agencies include health departments and WIC personnel. Government agencies include city, county, and other government entities without enforcement roles. Enforcement agencies include the US EPA, state pesticide regulatory agencies, and police, among others.

**Table 5. Type of inquirer**

# TYPE OF QUESTION

#### 6. Type of Question

The questions received at NPIC are most often related to health (e.g., effects, risk, etc.), pest control (e.g., how to control a pest, pest habits, etc.), and application (e.g., methods, label clarity, etc.). "Other" questions (1,494) include all wrong numbers and people seeking their pest control companies, among others.

Questions about regulations (1,020) range from "How do I get a new product registered?" to "Can the authorities make my neighbor stop spraying?" Questions about how to follow pesticide label directions were coded as "Application" questions (1,027).

People contacted NPIC in order to report a pesticide incident 133 times. In these cases, NPIC provides people with appropriate local referrals for enforcement, as needed.

Inquiries may involve more than one type of question. Inquirers asked 12,556 questions during this grant year in the course of 9,970 inquiries.

# **ACTIONS TAKEN**

#### 7. Actions Taken

#### **Primary actions:**

NPIC Specialists respond to inquiries in a variety of ways. The primary actions are summarized in Table 7.1. Most inquiries (8,338) were answered by providing information over the phone. Information was also sent via email in 1,590 cases and by mail in 56 cases. Upon request, NPIC brochures and other promotional materials were mailed to people 23 times in this period.

Table 7.1. Primary action taken

Transferred to EC / PC	30
Sent NPIC Outreach Material(s)	23

#### **Risk reduction actions:**

NPIC keeps track of certain conversation topics aimed at reducing pesticide risk. Specialists documented 5,669 risk reduction actions, detailed in Table 7.2.

Table 7.2. Risk reduction actions

#### Referrals to other organizations:

The number of referrals to various organizations is presented in Table 7.3. Specialists use their training and SOPs to evaluate the need for referrals, providing them only when the requested information is outside NPIC boundaries and there is an appropriate resource available to provide the information. Examples include "manufacturer/distributor" for detailed application instructions and product complaints, "county extension" for pest control advice, and "state pesticide regulatory agencies" for enforcement.

# INQUIRIES BY STATE

#### 8. Inquiries by State

The map below shows the number of inquiries received by NPIC from each state. The largest number of inquiries came from California, Texas, New York, and Florida. In addition to the states, NPIC received inquiries from US Virgin Islands (2), Puerto Rico (18), District of Columbia (39), Canada (94), and other countries (220). Sometimes a state cannot be identified during the inquiry.

Graph 8. Inquiries by EPA region

Graph 8 summarizes inquiries by EPA region.

The top 5 regions with a known state were:

- Region 4 (18.5%)
- Region 2 (10.7%)
- Region 9 (10.2%)
- Region 6 (9.2%)
- Region 5 (9.0%)

# **TOP 25 AIs FOR ALL INQUIRIES**

# 9. Top 25 Active Ingredients for All Inquiries

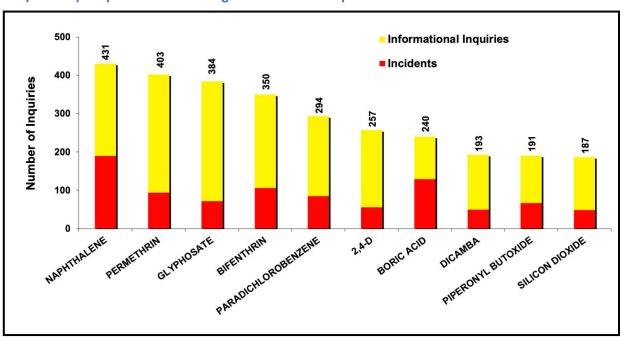

When inquiries to NPIC involve discussion of a specific product or active ingredient, Specialists record the product and the active ingredient in the PID. Naphthalene was discussed in more inquiries than any other single active ingredient this year (Table 9, Graph 9). Of the 431 inquiries involving naphthalene, 190 (44.1%) were incidents. Note that an inquiry may involve discussion of several active ingredients.

Graph 9 illustrates the number of informational and incident inquiries for the top active ingredients discussed during the grant year.

Table 9. Top 25 active ingredients for all inquiries

Active Ingredient	Total Inquiries	Incident Inquiries	Information Inquiries
NAPHTHALENE	431	190	241

**Graph 9. Top 10 pesticide active ingredients for all inquiries** 

# **INCIDENT TYPE**

#### 10. Incident Type

An incident may involve a spill, misapplication, exposure, adverse effects, or any combination of these events.

There were 2,080 pesticide exposures and 820 accidents. Charts 10.1 and 10.2 provide further details. Among reported exposures, inhalation was the most common route of exposure (43.0%), followed by dermal contact (18.2%) and ingestion (14.5%). When a specific exposure route could not be identified, specialists documented an "Unknown" exposure route (9.8%).

Indoor spills (81) were reported more often than outdoor spills (27). Among reported misapplications (522), 78.9% were misapplications by the homeowner or resident. Misapplications by homeowners decreased between 2019 (412) and 2018 (550). The number of incidents involving drift increased from 2018 (70) to 2019 (98).

Chart 10.1. Pesticide exposures (Total: 2,080)

# **TOP 25 AIs FOR INCIDENTS**

#### 11. Top 25 Active Ingredients for Incidents

The most common active ingredients reported during incident inquiries are listed in Table 11. The table identifies the number of exposures or accidents involving humans, animals, and other entities, such as environmental entities and property. Naphthalene and paradichlorobenzene were involved in more reported exposures/accidents than any other active ingredients. Both are commonly found in mothballs and similar products.

In Table 11, the top three active ingredients for human and animal exposures are highlighted below. Naphthalene, paradichlorobenzene, and boric acid were involved in the highest number of exposures for human incidents. The top three active ingredients with the highest number of exposures involving animals were boric acid, naphthalene, and bifenthrin.

Table 11. Top 25 active ingredients for incidents reported to NPIC<sup>1</sup>

Active Ingredient	Human Exposures	Animal Exposures	Other Accidents
NAPHTHALENE	358	39	283
PARADICHLOROBENZENE	300	34	239
BORIC ACID	58	67	12
BIFENTHRIN	54	36	34
PERMETHRIN	65	15	25

CHLORPYRIFOS	18	8	3

<sup>&</sup>lt;sup>1</sup> Note that incidents may include multiple humans, animals, and other entities. See Table 9 for a count of incident inquiries by active ingredient.

# **LOCATION & ENVIRONMENTAL IMPACT**

#### 12. Locations of Exposure or Accident

For incidents, specialists record the location of an exposure or accident. Of the 2,693 locations where exposures or accidents were documented, 85.0% occurred in the home or yard, 4.5% occurred at the intersection of home and agricultural property, and 2.2% occurred in an agricultural setting. Table 12 identifies the number of exposures or accidents reported to NPIC in a variety of other locations.

Based on inquiries, NPIC saw a decrease in incidents occurring at natural (e.g., ponds, lakes, streams) and treated water locations in 2019 (23) compared to 2018 (28).

#### 13. Environmental Impact

Table 13 presents the type of incidents reported for each kind of environmental or built entity. The most common environmental incidents reported to NPIC involve pesticide misapplications to buildings by residents (220).

Table 12. Location of exposure/accident

Location	Total

<sup>&</sup>lt;sup>1</sup>"Other" refers to miscellaneous items not included in previous categories (i.e., sidewalk, food).

# **CERTAINTY INDEX**

#### 14. Certainty Index

Table 14 and Graphs 14.1 and 14.2 summarize the certainty index (CI) assignments for all incidents that were eligible to be classified. An incident is eligible to be classified if there was an exposed person or animal with reported signs/symptoms and at least one active ingredient was known.

Of the total number of entities assigned a CI (2,396), 14.2% of the cases were assigned a certainty index of "consistent," 13.7% were assigned an index of "inconsistent," and 72.1% were considered "unclassifiable." Because none of the information reported to NPIC has been verified or substantiated by independent investigation, uncertainty is common. This is the case with many forms of self-reported data, which are often used for monitoring public health. As a result, the certainty index assignment for "definite" is rarely assigned.

All certainty index assignments are reviewed by a quality assurance specialist. Dr. Berman, DVM, provides additional consultation for human and animal incidents.

What is the Certainty Index?

The certainty index is an estimate by NPIC as to the likelihood that the reported signs and symptoms were "consistent" or "inconsistent" with published reports/materials for the identified active ingredients, in the context of the reported pesticide exposure.

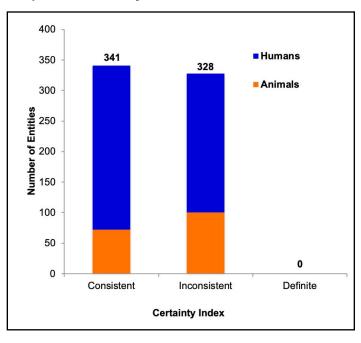

The certainty index is "unclassifiable" when one or more of the following criteria apply:

- An exposure occurred, but no symptoms were reported.
- No active ingredient could be identified.
- The presence or absence of symptoms was unknown.

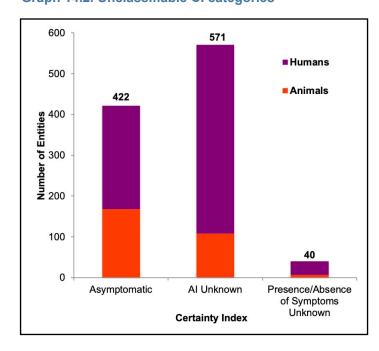

Table 14. Incident inquiries by certainty index (CI)

CI for A	All Categorie	s of Entities	S		Breakdown of Human-Entity Incident Inquiries						
Certainty Index (CI)	Humans	Animals	Other	Total	I Male I Female I Groups I				Total Male Fema		Gender Not Stated
Unclassifiable	750	283	694	1727	240	402 98 10					
Definite	0	0	0	0	0	0 0 0					
Consistent	269	72	0	341	95	156	18	0			
Inconsistent	228	100	0	328	85	140	3	0			

**Graph 14.1. Certainty index for incidents** 

Graph 14.2. Unclassifiable CI categories

# SEVERITY INDEX

#### 15. Severity Index

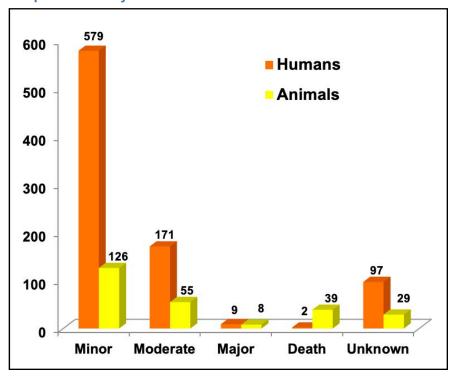

Table and Graph 15 summarize the severity of symptoms for all human and animal incidents reported to NPIC.

For all human pesticide incidents with reported exposures, 46.5% had minor symptoms, 13.7% had moderate symptoms, 0.7% had major symptoms, and 0.2% reported a death. Symptoms were unknown in 7.8% of human incidents. In 31.1% of human exposure incidents, the person reported that they did not experience any symptoms.

Table 15. Human and animal incidents by severity index (SI)

SI for All Cate	egories of E	intities		Break		luman-Enti quiries	ty Incident	
Severity Index (SI)	Humans	Animals	als Total Male Female Groups				Gender Not Stated	
Minor	579	126	705	188 357		33	1	
Moderate	171	55	226	61	103	103 7 (		
Major	9	8	17	5	4	0	0	
Death	2	39	41	1	1	0 0		
Unknown	97	29	126	34	50	7	6	
Asymptomatic	387	198	585	131	181	72	3	

Graph 15. Severity index for human and animal incidents

#### What is the Severity Index?

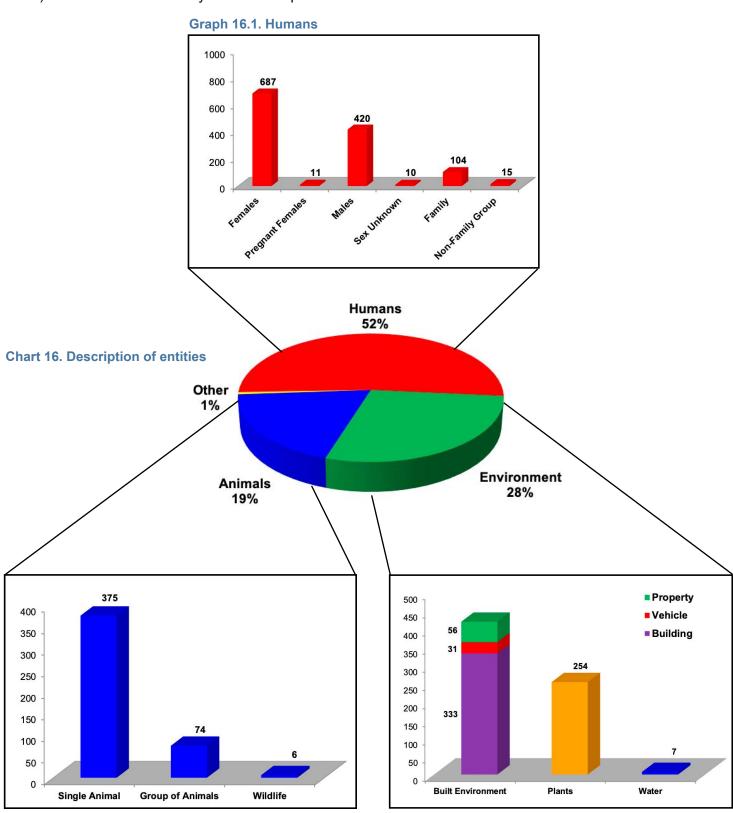

The severity index is an estimate by NPIC as to the severity of signs/symptoms reported for incidents. The severity of signs/symptoms can be categorized as minor, moderate, major, death, unknown, or asymptomatic. The NPIC severity index is based on criteria used by poison control centers in their National Poison Data System (NPDS).

# **DESCRIPTION OF ENTITIES**

#### 16. Description of Entities

**Graph 16.2. Animals** 

The chart and graphs below provide a summary of entities involved in pesticide incidents. Of the 2,396 entities involved in incidents reported to NPIC during this period, 52.0% were human, 19.0% were animals, and 28.4% were environmental nontarget entities. Other entities (13) are miscellaneous items (i.e., sidewalk, food). Pesticide incidents may involve multiple entities.

2019 ANNUAL REPORT

**Graph 16.3. Environmental entities** 

# **DEATHS WITH KNOWN ACTIVE INGREDIENT**

#### 17. Reported Deaths

Of the 455 animal entities involved in pesticide incidents, 39 deaths were reported. Of those, there were 27 animal deaths where the active ingredients were known (Table 17.1).

Table 17.2 describes reported deaths with known active ingredient(s) where signs and/or symptoms were consistent with literature, in the context of the reported exposure scenario.

Two human deaths were reported to NPIC in 2019. One individual reportedly mixed an unknown "Hot Shot" product with intravenously injected methamphetamines. Specific product or exposure information could not be provided to NPIC for the second individual.

Table 17.1. Reported deaths with known active ingredient

# **ENTITY AGE**

#### 18. Entity Age

Table 18 and Graph 18 summarize the ages of people involved in incidents reported to NPIC. Among 1,128 single human entities, NPIC was able to collect the person's age 84.4% of the time. NPIC aims to capture the age for all human entities; occasionally callers decline to provide that information.

Among the 952 humans with known age, 7.8% were children (ages 4 and under), and 32.4% were seniors (ages 65 and over).

Graph 18. Age of people involved in reported incidents

incidents

# **NOTABLE EXPOSURES**

#### 19. Notable Exposures

There were 2,396 entities potentially exposed to pesticides in 1,613 reported incidents.

#### Figure 19.1

There were 1,613 pesticide incidents reported, involving 2,396 exposed entities (people, animals, buildings, plants, soil, and water).

Total = 2,396 entities

#### Figure 19.2

Human and animal entities potentially exposed to a known pesticide, with reported signs/symptoms.

Total = 669 entities

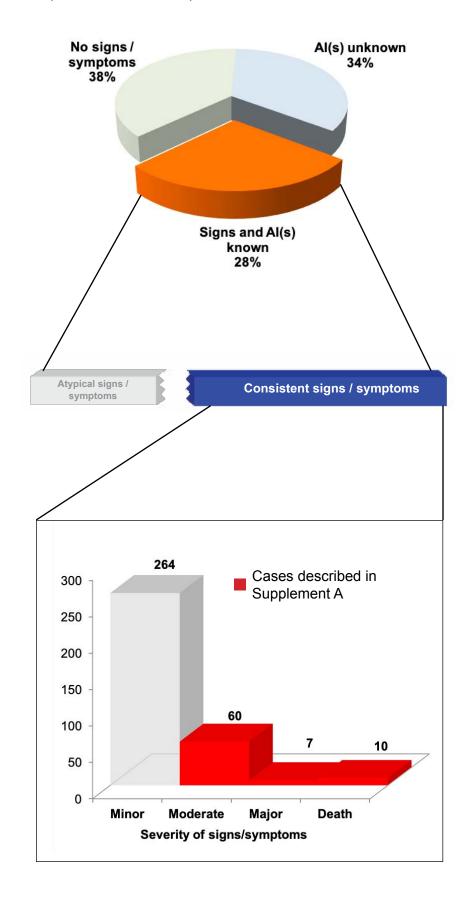

#### Figure 19.3

Human and animal entities potentially exposed to a known pesticide with reported signs/ symptoms that were **consistent** with reports in the literature for that pesticide.

Total = 341 entities

Signs and symptoms are compared to the open literature, including fact sheets, case reports, textbooks, and articles. Furthermore, the timing of onset and duration are considered.

The following pages (36-41) describe the 77 entities represented by the red bars in Figure 19.3.

# **VETERINARY REPORTING**

NPIC developed a web-based portal for veterinarians to report adverse reactions to pesticides among animals. NPIC does not verify or conduct quality assurance of the information submitted into the Veterinary Incident Reporting Portal (VIRP).

Veterinarians submitted 20 incident reports to the VIRP involving 20 animals (14 canine and 6 feline). All VIRP reports are forwarded to EPA quarterly, in their entirety.

Table 20.1 and Chart 20.1 summarize the formulation of products that were involved in the incidents reported by veterinarians. About half of incidents were liquid products (40%).

Table 20.2 and Chart 20.2 summarize the pesticide types that were involved in the incidents reported by veterinarians. Most of the products reported in incidents were insecticides (80%).

Table 20.1. Product formulations as reported in VIRP

Known Formulations	Number of Products
	2019

Total =	20

Chart 20.2. Product types reported in VIRP

# **VETERINARY REPORTING**

Table 20.3 and Chart 20.3 show the types of animal symptoms reported to the VIRP. Symptoms are classified as dermatological (e.g., irritant, sloughing, ulcer), gastrointestinal (e.g., diarrhea, vomiting), neurological (e.g., depression, excited state, seizures, tremors), none, or other. Multiple symptoms may be reported for each animal. Of the reported symptoms, 53% were classified as neurological. Twenty percent (20%) were classified as gastrointestinal, 17% were classified as other, and 10% were classified as none.

Table 20.4 and Chart 20.4 summarize the outcomes associated with each animal incident reported in the VIRP. Multiple animals may be involved in each VIRP report. Thus, totals reflect the number of animals, as opposed to the number of reports.

Of the total number of animals involved in VIRP incident reports, 60% of the cases were ongoing. The affected animals had recovered at the time of the report in 20% of cases. Ten percent (10%) of the outcomes reported an animal death.

# **ECOLOGICAL REPORTING**

In 2009, NPIC developed a web-based portal to facilitate reporting of ecological incidents. It was designed by the US EPA Office of Pesticide Programs (OPP), built and hosted by Oregon State University.

NPIC does not verify reports through independent investigation, nor does NPIC conduct quality assurance of the information submitted into the Eco-portal. NPIC provides each report, without modification, to OPP quarterly, in their entirety. More recently, NPIC developed programming to make that delivery automatic and immediate.

Reports submitted to the Eco-portal in 2019 involved possible exposures to bees, plants, and fish. Table 21.1 summarizes the active ingredients involved in the 25 reports submitted to the Eco-portal.

Table 21.1. Active ingredients involved in the Eco-reports
